

98" / 110" Wall Mount Installation

1. Total Weight is $\geq 90\text{kg}$ so a suitable wall structure is required for mounting.
2. Fix the wall mount bracket on the wall with the attached expansion screw. Note, for 98" use one bracket, for 110" use two brackets. Pay attention to the levelness after fixing;
3. Fix bracket lock kit on the wall with the expansion nail. The lower surface of the bracket lock kit is 675mm away from the wall mount bracket top edge. For 98", horizontal center distance is 800mm. For 110", horizontal center distance is 1500mm;
4. Fix the wall mount bar on the back of the set;
5. Hang the set on the wall mount bracket - more than 4 people to lift the unit;
6. Use two M8*20mm screws from the bottom of the mount to prevent the set from tilting forward.
